

UNBC Notes App

A simple mobile Notes app built with React Native and Expo using TypeScript.

Features

- **Profile Management:** Create and edit your profile (Name, Email, Profession)
- **Notes Management:** Create, read, update, and delete notes
- **Platform-Specific Storage:**
 - Native (iOS/Android): SQLite with Drizzle ORM
 - Web: AsyncStorage
- **Auto-Refresh:** Note details automatically reload after updates
- **Clean UI:** Simple, minimal, and student-friendly design

Tech Stack

- React Native with Expo
- TypeScript
- React Navigation (Native Stack)
- **Native Storage:** SQLite with Drizzle ORM (iOS/Android)
- **Web Storage:** AsyncStorage (Web platform)
- Expo Vector Icons
- Expo SQLite

Project Structure

```
unbc-notes/
├── components/           # Reusable components
│   ├── Header.tsx
│   ├── NoteCard.tsx
│   └── EmptyState.tsx
├── Screens/             # Screen components
│   ├── ProfileScreen.tsx
│   ├── HomeScreen.tsx
│   ├── NoteDetailsScreen.tsx
│   ├── CreateNoteScreen.tsx
│   ├── EditNoteScreen.tsx

|─ App.tsx           # Root component
|─ index.js          # Entry point
|─ package.json
```

Installation

1. Navigate to the project directory:

```
cd unbc-notes
```

2. Install dependencies:

```
npm install
```

Running the App

Start the development server:

```
npm start
```

Run on specific platform:

```
# Android
npm run android

# iOS
npm run ios

# Web
npm run web
```

App Flow

1. **First Launch:** Shows profile screen to create your profile
2. **After Profile Creation:** Redirects to Home screen
3. **Subsequent Launches:** Opens Home screen directly if profile exists
4. **Home Screen:**
 - Lists all notes
 - Floating + button to create new note
 - Settings icon in header
5. **Note Details:** View full note with edit and delete options
 - Automatically refreshes when returning from edit screen
6. **Create Note:** Form to create new notes
7. **Edit Note:** Form to edit existing notes
8. **Settings:** View and edit profile, reset profile option

Storage

The app uses platform-specific storage implementations:

Native (iOS/Android)

- **Notes:** SQLite database with Drizzle ORM
- **Profile:** AsyncStorage with key: `@unbc_notes_profile`
- All data persists locally on device

Web

- **Notes:** AsyncStorage with key: `@unbc_notes_list`
- **Profile:** AsyncStorage with key: `@unbc_notes_profile`
- All data persists in browser's local storage

The Metro bundler automatically resolves the correct storage implementation at runtime based on the platform.

Notes Data Structure

```
interface Note {  
  id: string;  
  title: string;  
  content: string;  
  createdAt: string;  
  updatedAt: string;  
}
```

Profile Data Structure

```
interface Profile {  
  name: string;  
  email: string;
```

```
profession: string;  
}
```

Features

- ☒ Profile onboarding on first launch
- ☒ Notes CRUD operations
- ☒ Clean and minimal UI
- ☒ Empty state handling
- ☒ Delete confirmation dialogs
- ☒ Smooth navigation
- ☒ Platform-specific storage (SQLite for native, AsyncStorage for web)
- ☒ Auto-refresh note details after updates
- ☒ TypeScript for type safety
- ☒ Date formatting utilities
- ☒ Alert utilities for user feedback

Requirements

- Node.js (v14 or higher)
- npm or yarn
- Expo CLI (installed globally or via npx)
- Expo Go app on your mobile device (for testing)

Notes

- **Native platforms (iOS/Android):** Uses SQLite with Drizzle ORM for notes storage
- **Web platform:** Uses AsyncStorage for notes storage
- The app uses Metro bundler's platform-specific file resolution (`.native.ts` and `.web.ts`)
- Profile data is always stored in AsyncStorage across all platforms
- The app follows a simple academic/lab-style design
- Perfect for learning React Native, Expo, and platform-specific implementations
