

Task 2: Test Remote Push Notifications on Android Device

Prerequisites

- Android physical device (not emulator)
 - `unbc-app.apk` file
 - Expo account (free)
 - Internet connection
-

Steps

1. Download APK from Module

- Download `unbc-app.apk` from the course module
- Save it to your Android device (Downloads folder)

2. Install APK

1. Enable **"Install Unknown Apps"** in Android Settings → Security
2. Open **Files** app → **Downloads**
3. Tap `unbc-app.apk` → **Install**
4. Grant notification permissions when prompted

3. Get Push Token

1. Open the `unbc-app` on your device
2. Go to **Settings** screen
3. Scroll to **"Push Notifications"** section
4. Copy the token (starts with `ExponentPushToken[...]`)

4. Test Push Notification

1. Open <https://expo.dev/notifications> in browser
 2. Paste your token in **"Recipient"** field
 3. Enter **Message title** and **Message body**
 4. Click **"Send a Notification"**
 5. Check your Android device - notification should appear
-

Expected Results

- ✓ **Success:** Notification appears in notification tray
 - ✗ **No token:** Use physical device, grant permissions
 - ✗ **No notification:** Check token format, internet connection, permissions
-

Troubleshooting

- **Token shows "Not available"**: Use physical device (not emulator), grant permissions
 - **Notification not received**: Verify token copied correctly, check internet, try again
 - **"Invalid token" error**: Copy entire token including `ExponentPushToken[` and `]`
-

That's it! 🚀
